Systam heel bed end edge

Code : XSP902T1HW

The Systam heel bed end edge is designed to prevent and assist in the treatment of pressure sores and heel injuries for individuals with low to moderate mobility. Made from viscoelastic foam with memory effect, it provides targeted support by reducing pressure in high-risk areas. The bi-stretch polyurethane coating minimises friction and shear effects, while raised sides prevent leg slippage. Its dual-function design allows for partial or complete pressure relief, making it an ideal solution for those at risk or with existing pressure injuries.

FEATURES

- Prevents and treats pressure sores and heel injuries in cases of low to normal mobility
- Product made of viscoelastic foam with memory effect; white areas with low bearing capacity (softer foam), and blue areas with high bearing capacity (firmer foam)
- The length is great enough to support the knee
- Bi-stretch polyurethane coating minimises friction and shear effects
- Dual-function relief allows for partial or complete pressure discharge
- Ergonomic design ensures optimal heel positioning
- Raised sides prevent legs from slipping off the pad
- Non-slip base
