Maxxcare Heel Pro Evolution protector boot

Code (s) : XVHEELSML, XVHEEL, XVHEELXL

The Maxxcare Heel Pro Evolution boot fully suspends the heel rather than just reducing pressure on it. Four air filled tubes lift the heel clear of the bed or chair and transfer load to the calf and lower leg, removing direct heel contact. This supports prevention and treatment of heel pressure injuries.
The lightweight, breathable design promotes comfort and continuous wear, while allowing free foot movement in bed and reducing shear risk. The non-skid sole enables short trips without removing the boot. Two velcro straps make it quick to fit and help maintain consistent positioning.

FEATURES

- Fully suspends the heel and transfers load to the calf and lower leg for optimal elevation of the heel and ankle
- Two air filled universal rear tubes and two size specific side tubes
- Gradual transition to the calf offloads the Achilles tendon
- Maintains consistent positioning to reduce rotation and slippage between checks
- Minimises shear and microclimate at the heel
- Lightweight, breathable and designed for continuous wear
- Non-skid sole allows safe short trips without removing the boot
- Quick to fit with two velcro straps
