Systam heel support boot

Code : XSP903T1HW

The Systam Heel Support Boot is a heel protector positioned inside the bed for the prevention and healing of pressure sores. Designed for patients with limited or no mobility, it reduces pressure peaks with viscoelastic memory foam and a curved form. The hollow Achilles zone protects high-risk areas, while knee support prevents hyper-extension. Bi-stretch, breathable, fire-resistant fabric cover minimises friction and shear, and the non-slip base ensures secure placement. Height design removes the need for a bed frame.

FEATURES

- Designed for in-bed use to help prevent and support healing of heel pressure injuries
- Suitable for individuals with limited or no mobility
- Moulded visco elastic memory foam reduces pressure peaks in high-risk heel areas
- Hollow Achilles tendon zone helps minimise pressure on a vulnerable area
- Extended length supports the knee and helps prevent hyper-extension
- System height removes the need for a bed frame
- Bi-stretch polyurethane coated fabric cover reduces friction and shear
- Soft, breathable surface helps reduce the risk of maceration
- Non-slip base helps keep the boot securely in place
- Fire-resistant coating
