Systam Viscoflex+ cushion

Viscoflex + is a contoured wheelchair cushion made of viscoelastic foam with memory effect and an ergonomic insert under the pelvis. The viscoelastic foam moulds more effectively, providing greater positioning stability, pressure redistribution and comfort. This wheelchair cushion is ideal for users who require comfort in combination with a low to medium level of pressure risk injury prevention.

FEATURES

- The anatomic shape combined with the mechanical properties of viscoelastic foam increases the area of contact with the cushion, improving patient stability, position and comfort
- Surface channels allow for improved airflow and micro climate
- High-density viscoelastic foam gives the cushion a better resistance to permanent deformation than other industrial-type viscoelastic foam contoured wheelchair cushion, avoiding punching effects
- Viscofoam insert structure prevents forward sliding of the client in the wheelchair cushion
- A high weight-bearing viscofoam insert acts as a framework that increases support, improving stabilisation and immersion of high risk bony protuberances of the sacrum, ischia and pelvis
- Minimal level of support and stability immersion
- Available in 9 sizes

Systam Viscoflex+ cushion
